TomorrowWorks

From your CV to a career path for the AI era

Team NoMoreTokens

SDC Hackathon 2026

Domain 1: Aiversecity Future-Ready Workforce

AI is changing tasks faster than career advice can keep up

555,509

online job offers in Malaysia in Q2 2026

DOSM Job Market Insights, Q2 2026

112 of 427

occupations exposed to generative AI; 13 in the top gradient

ILO Working Paper 140, 2025

The evidence exists but is scattered.

A person cannot combine DOSM, ILO and ESCO alone.

A fresh graduate holding a job ad cannot tell:

Which skills does it really ask for?

Does my CV show them?

Which role should I aim for, and what do I learn first?

This publication uses the ESCO classification of the European Commission.

Built first for fresh graduates, useful to everyone planning skills

Fresh graduate

Hakim chooses a first role and writes a CV for it.

Working adult

Aina’s routine accounting tasks are exposed to AI.

HR and career centres

Team view: shared skill gaps and a group course plan.

Regional skills centre

Region view: SDG contribution in totals, no names.

All people and teams shown are fictional. No real CVs or personal data.

From CV to job ad to a plan you can follow

1 Your CV

Paste or upload. Read in the browser, contact details removed. You tick the ESCO skills that are true.

›

2 A job ad

Paste an ad. Its skills are sorted: on your CV, held but not shown, still to build.

›

3 Closest role

Demand (DOSM) and AI exposure (ILO) for that role, with source and date.

›

4 Your plan

Ordered courses with stated time, a Malaysian NOSS/SKM route, SDG links.

Check my CV, on its own

No job ad needed. Plain, source-cited fixes (no AI), run in the browser, nothing stored.

See what your CV already shows, and what it misses

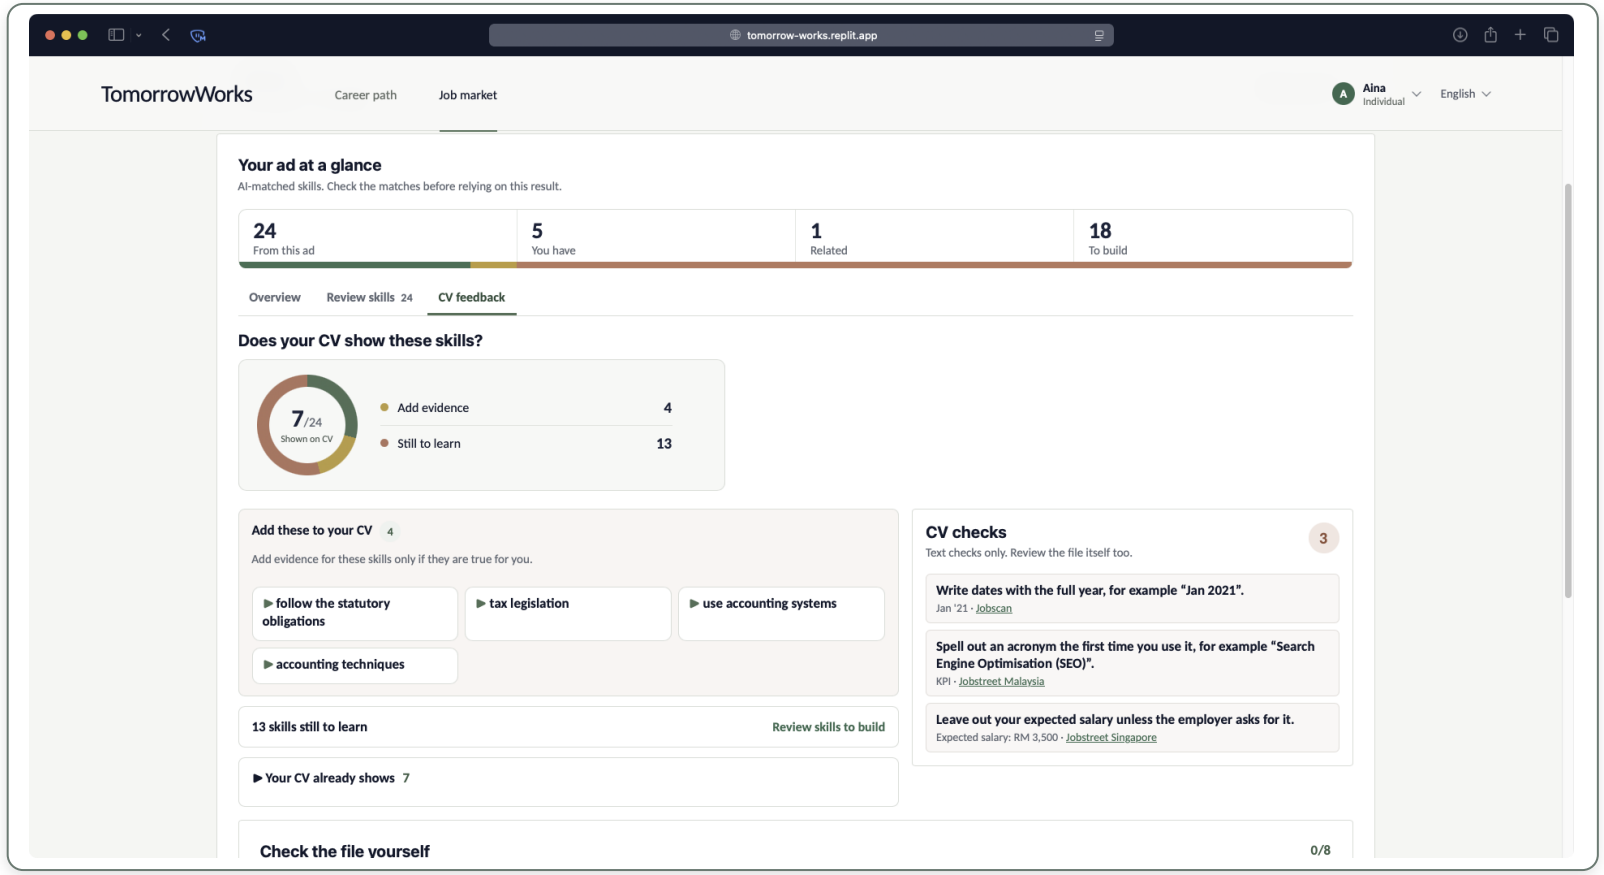

7 of 24

skills in the ad already show on the CV

4 can be added, if true

13 still to learn

Three CV habits flagged, each with a source.

Fictional CV and ad. Skills are AI-matched; the person checks them.

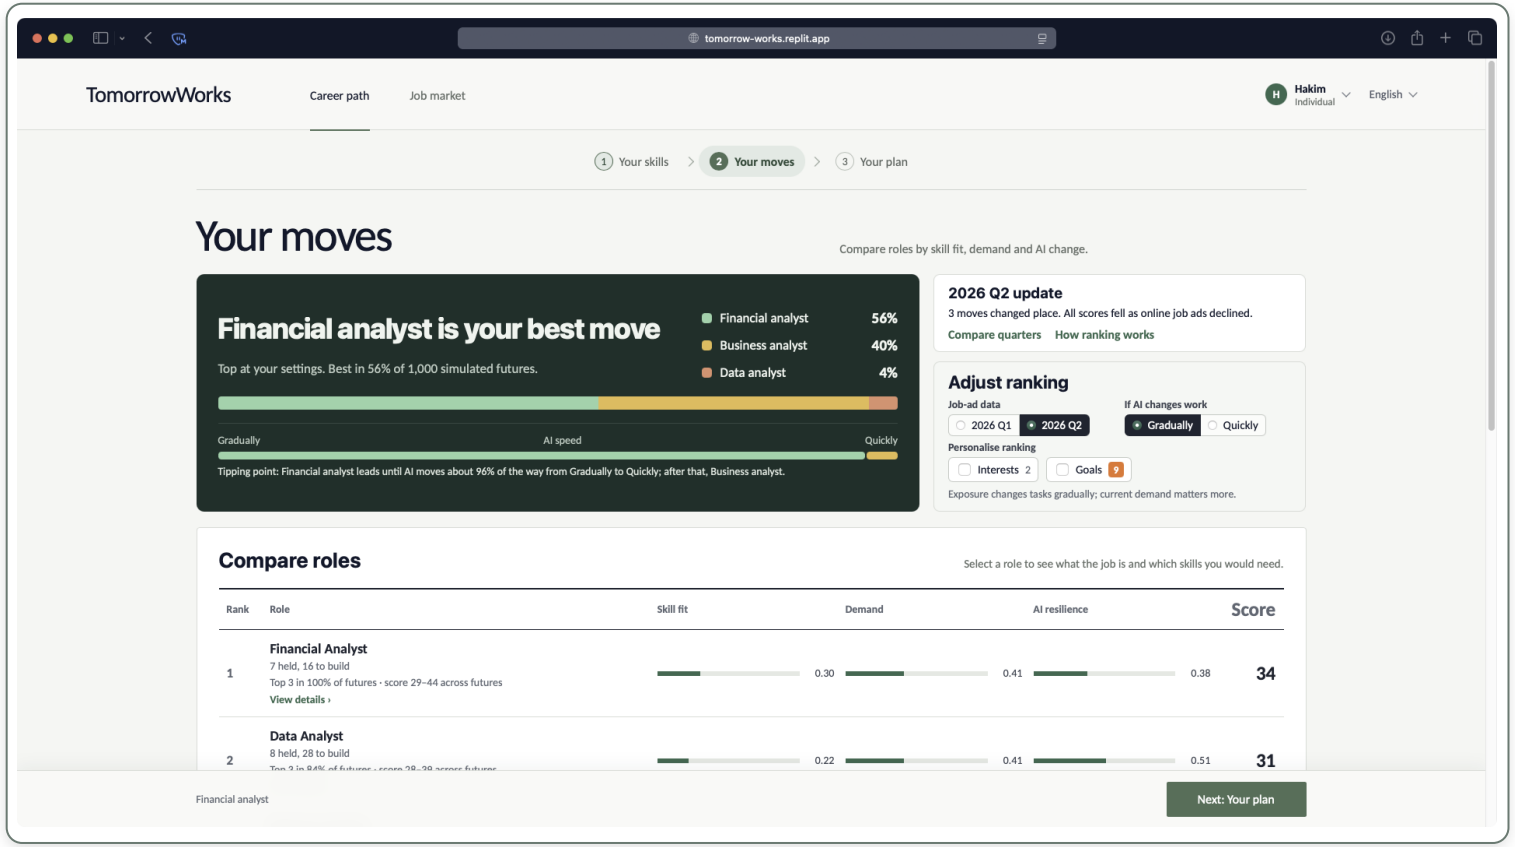

Trend data feeds the ranking, and you can watch it change

Score = skill fit + demand trend (DOSM) + AI resilience (ILO)

Switch the quarter or the AI speed and the ranking moves.

1,000 simulated futures show how stable the answer is.

ILO, Microsoft and Anthropic AI-impact views, side by side.

An updatable source: a new DOSM quarter is one command

1

DOSM publishes

A new Job Market Insights quarter appears

2

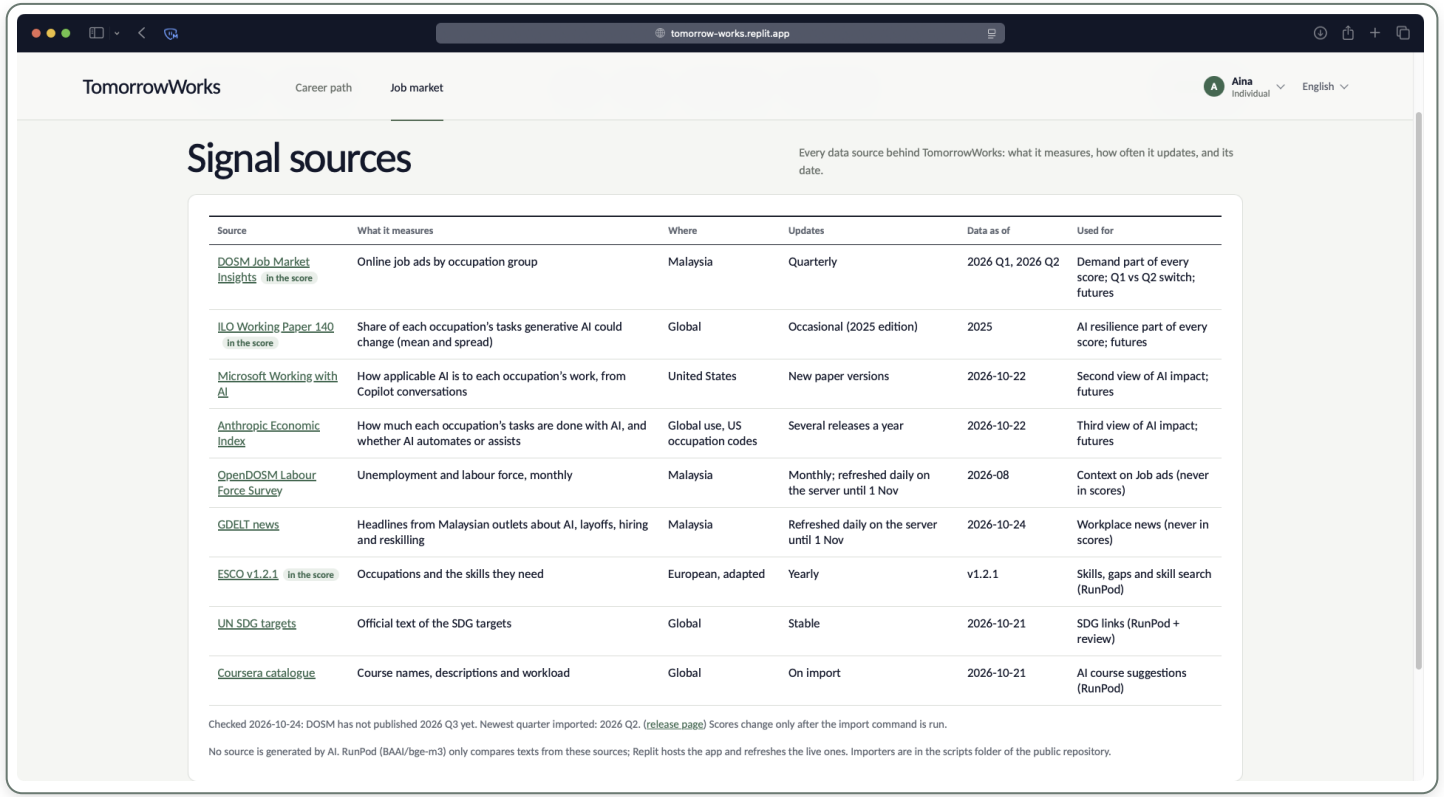

Server checks daily

Looks for the “Data JMI” link; shows the result

3

One import command

A person approves it; every score updates

Signal sources: every source with its date. The daily DOSM check shows under the table.

How it works: open data, open model, no database

Browser

React 19 + TypeScript. Scoring, CV checks, futures, plan, on committed snapshots.

›

Replit Autoscale

Node 20 server, no dependencies. /api/cv-skills, /api/skill-search, /api/news, /api/lfs, /api/dosm-next

›

RunPod Serverless

BAAI/bge-m3 turns text into vectors (Job B).

vectors saved in the repository

Public data

DOSM, ILO, ESCO, UN SDG, OpenDOSM, GDELT; all with source and date.

RunPod GPU Pod (Job A, once)

13,960 ESCO skills embedded in 92.5 s on an RTX A5000.

Hosting

Replit publishes the app; the RunPod key is a Replit Secret.

No database: nothing about a person is stored.

AI only maps text onto lists we can check

No invented data

AI never writes roles, courses or scores. Every number shows its source, date and geography.

Fairness audit, published

Ethnicity words pulled in language skills (63 against 0). We strip identity phrases first: reduced, not solved.

Checked, not guessed

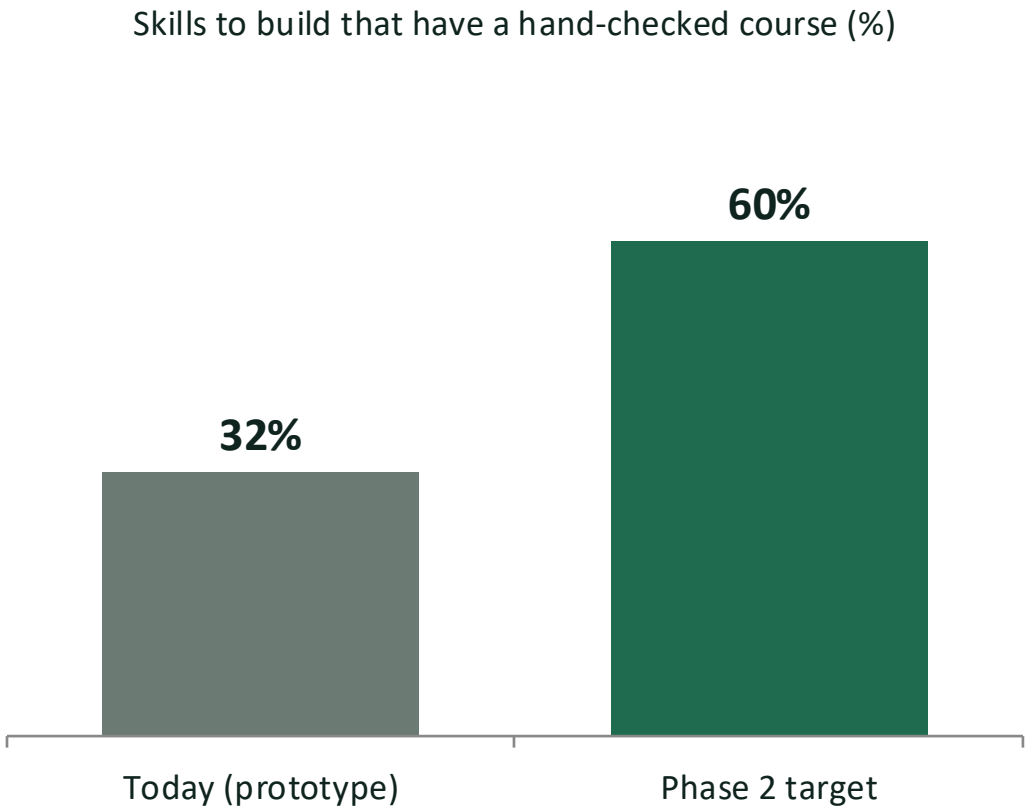

AI alone proposed 73 SDG links; two reviewers judged 21 relevant (29%), so only reviewed links are used.

Private by design

Contact details removed in the browser. No account, no database, nothing stored.

Impact: SDG 4 first, then SDG 8, measured on what we can check

Goals

- SDG 4: skills for employment (target 4.4)
- SDG 8: decent work (targets 8.2, 8.5)

Baseline we measured

- 22 skills to build for two sample people; 7 have a hand-checked course (32%), 15 an unchecked AI match
- Sample ad: 24 skills, 7 shown on the CV (29%)

This publication uses the ESCO classification of the European Commission.

Phase 2: broader, more updatable, tested with real people

More roles

The roles graduates actually apply for, each hand-checked.

Updatable, finer data

A finer Malaysian demand source and a quarterly DOSM import a person approves.

Compare several ads

See which skills repeat across ads, so you learn those first.

Real people

Interviews with graduates, career centres and HR teams.

Courses and languages

More hand-checked courses and reviewed Malay and Chinese skill names.

Optional accounts

With consent, save your plan and link it to your career centre or employer. No account needed to use the app.

Try it now

Your experience can take you further.
